

SMARTBANK - PYTHON BANKING **SYSTEM PROJECT REPORT**

1. Introduction

SmartBank is a Python-based banking application developed to perform basic banking operations. The project uses a menu-driven approach where users can create accounts and perform different banking activities.

2. Technologies Used

- Python
- Visual Studio Code

3. Project Features

- Create Account
- Deposit Money
- Withdraw Money
- Check Balance
- Display Account Details
- Menu-driven User Interaction

4. Concepts Used

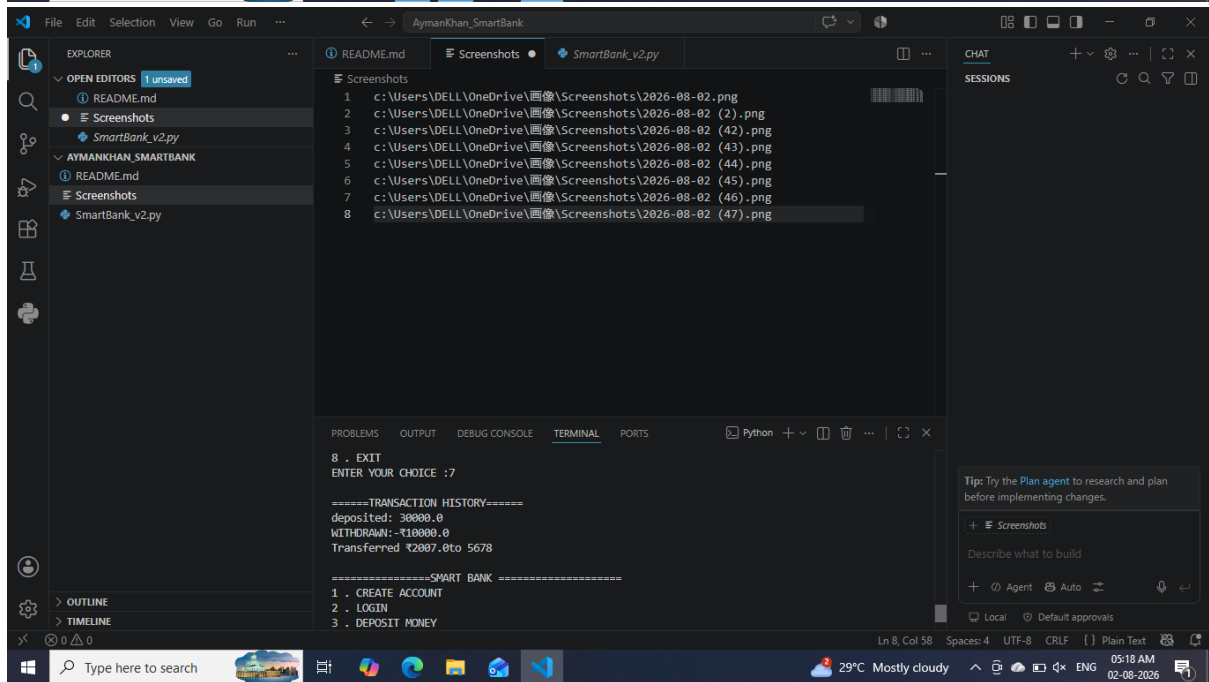

- Variables
- Data Types
- User Input and Output
- Conditional Statements
- Loops
- Functions

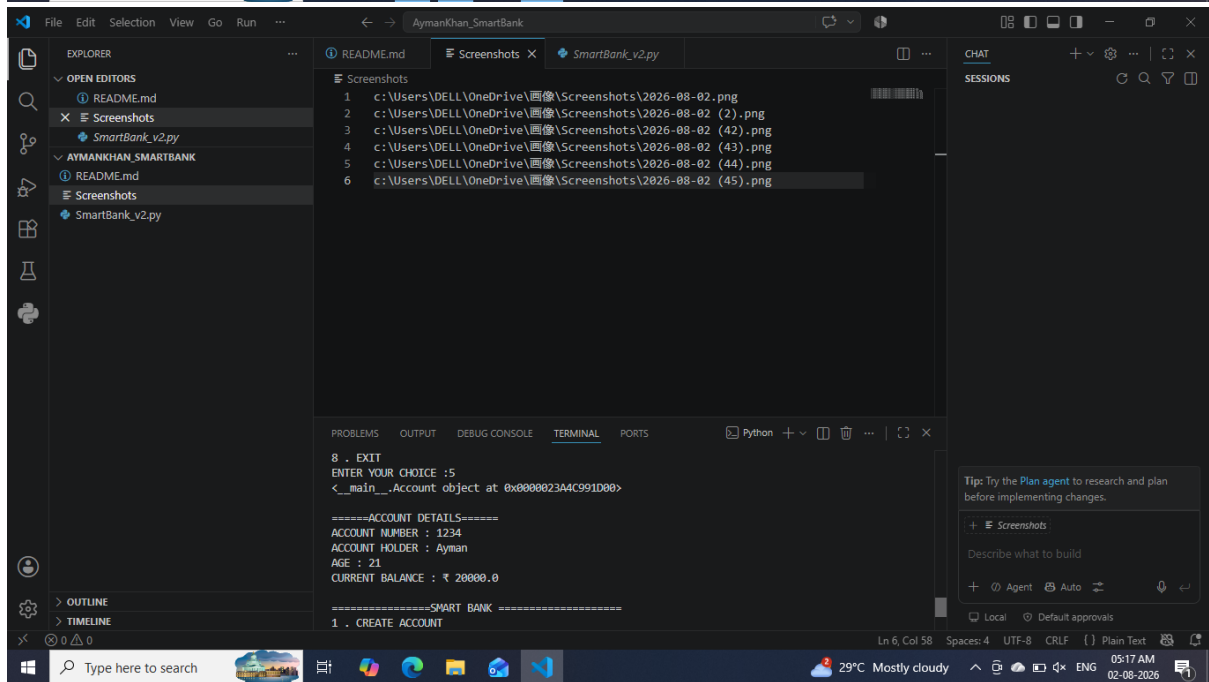

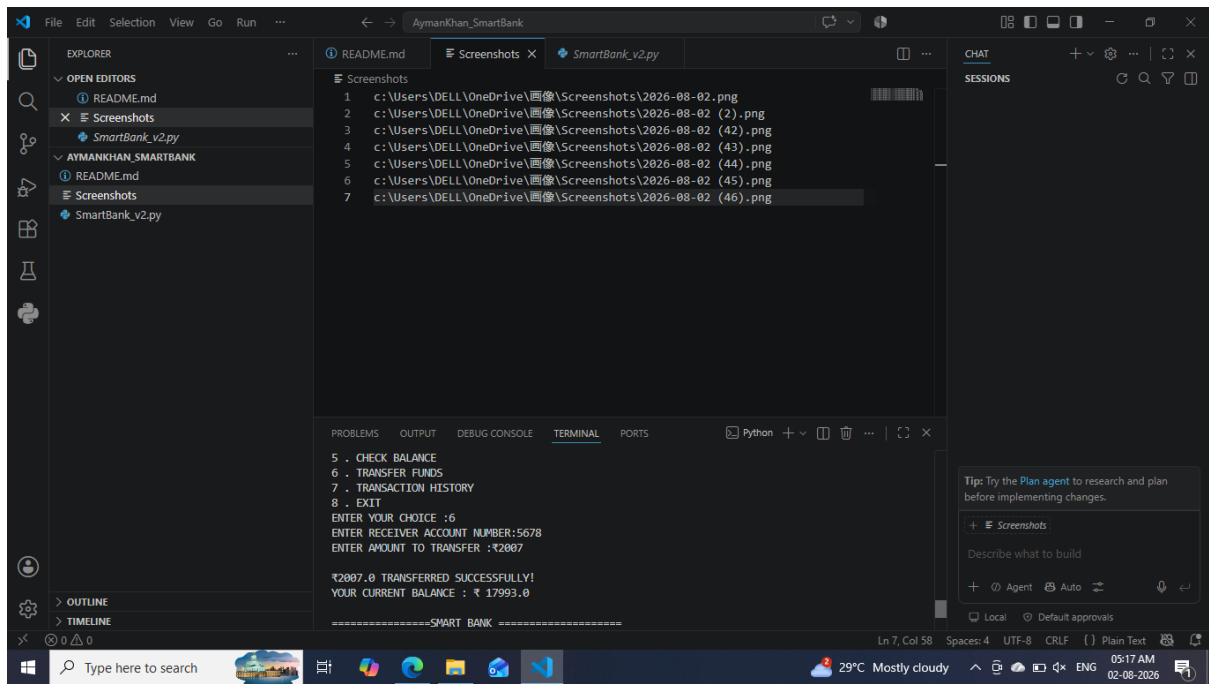

5. How the Project Works

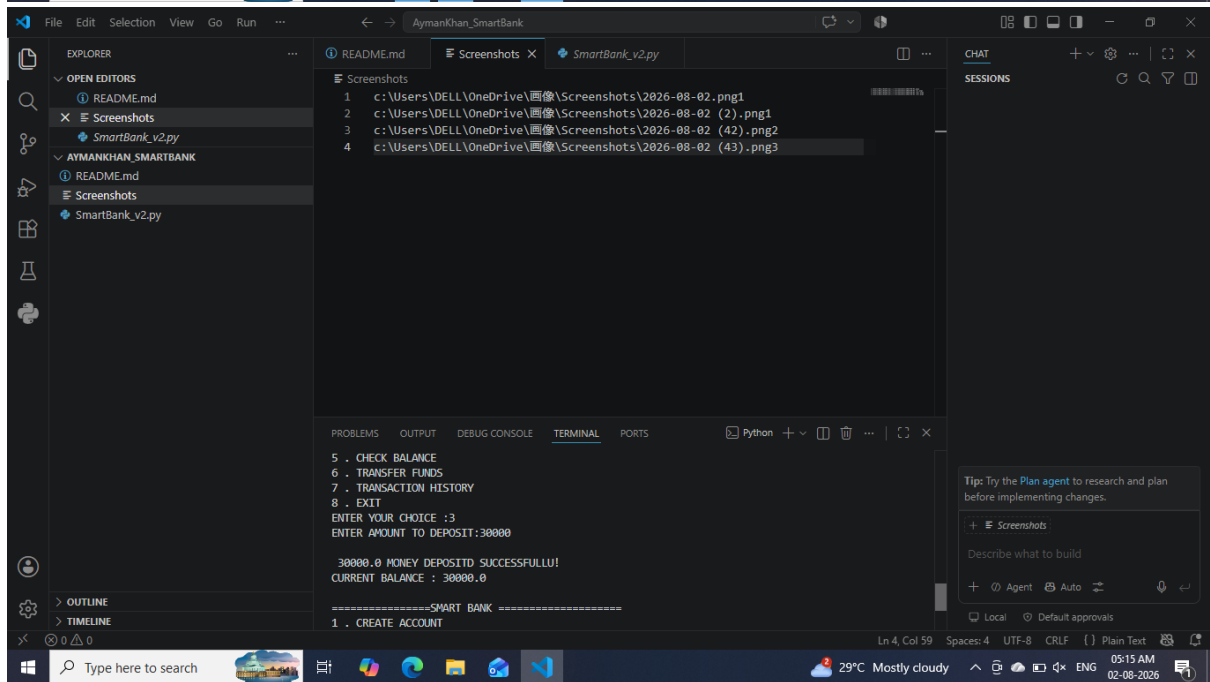

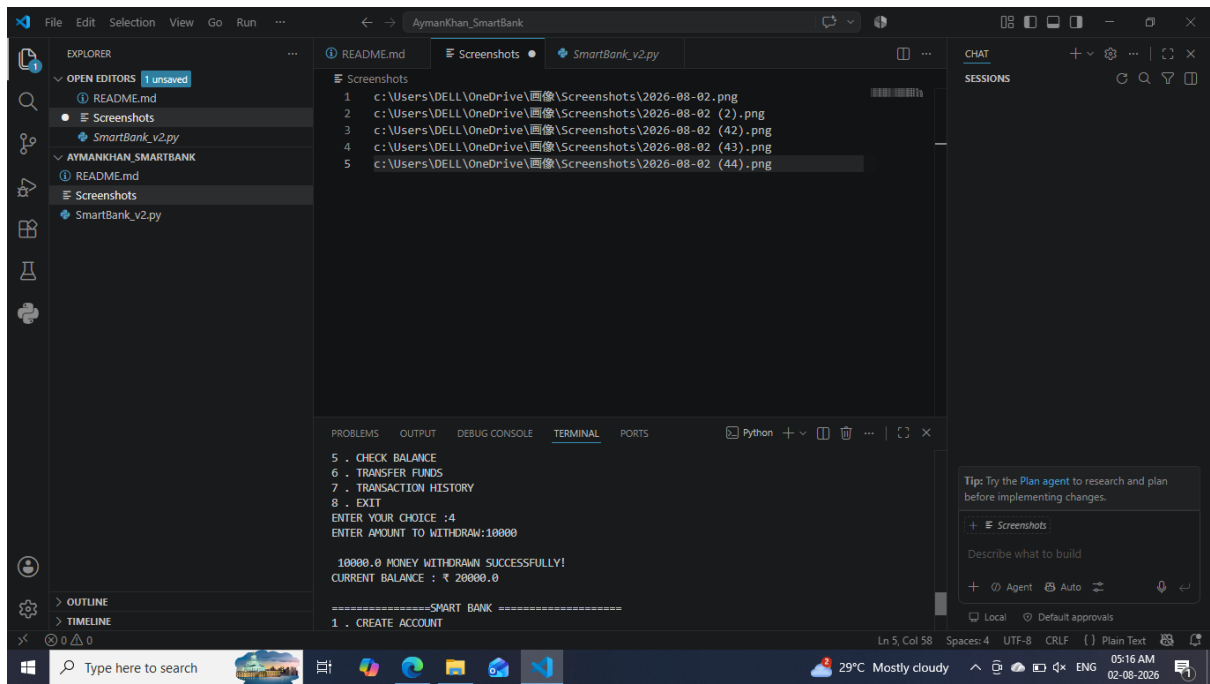

The user selects options from the menu. The program takes user input, processes the requested banking operation, and displays the result.

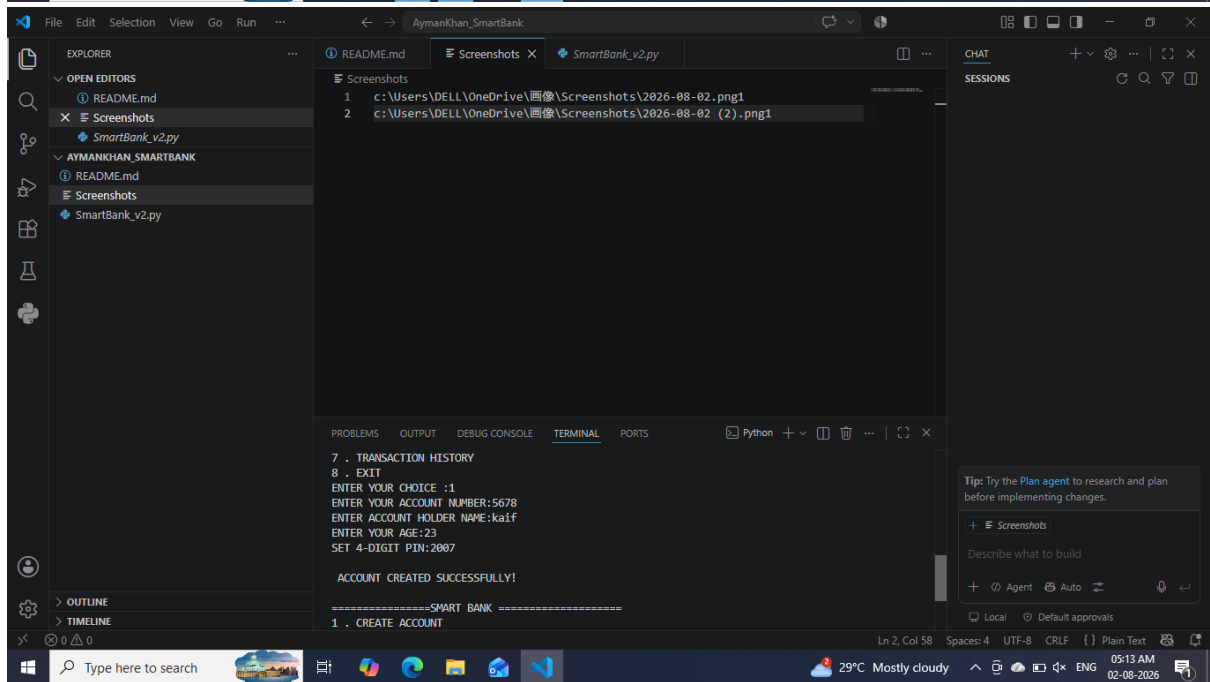

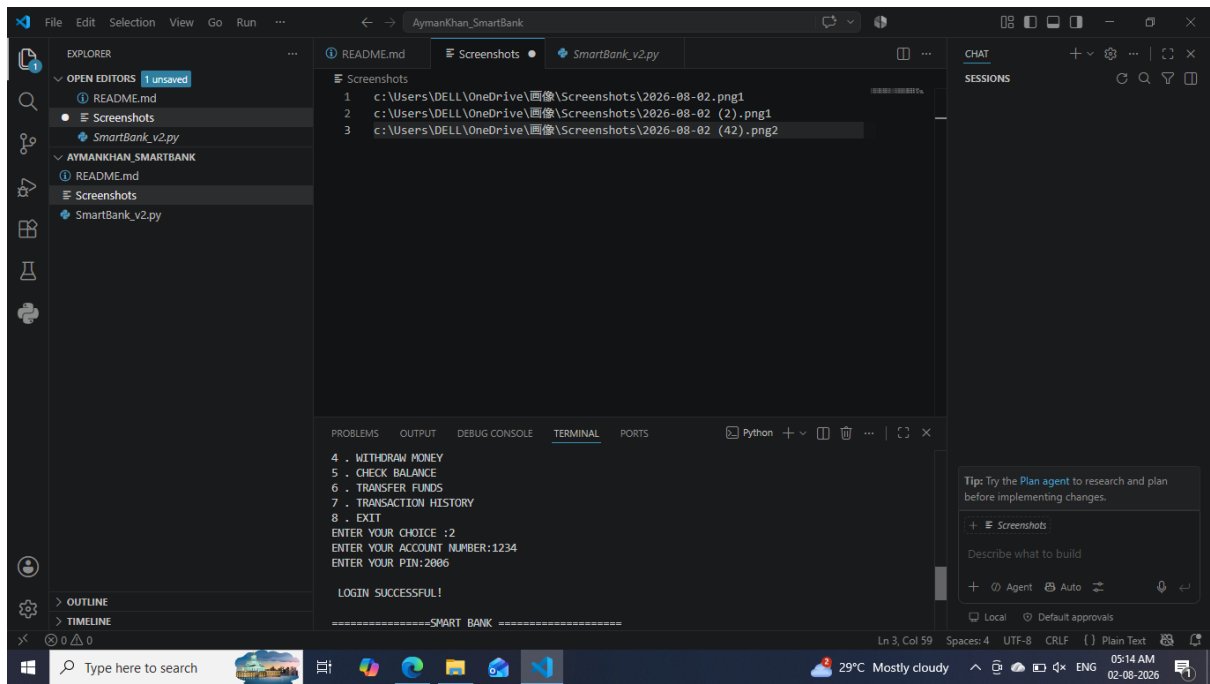

6. Project Screenshots

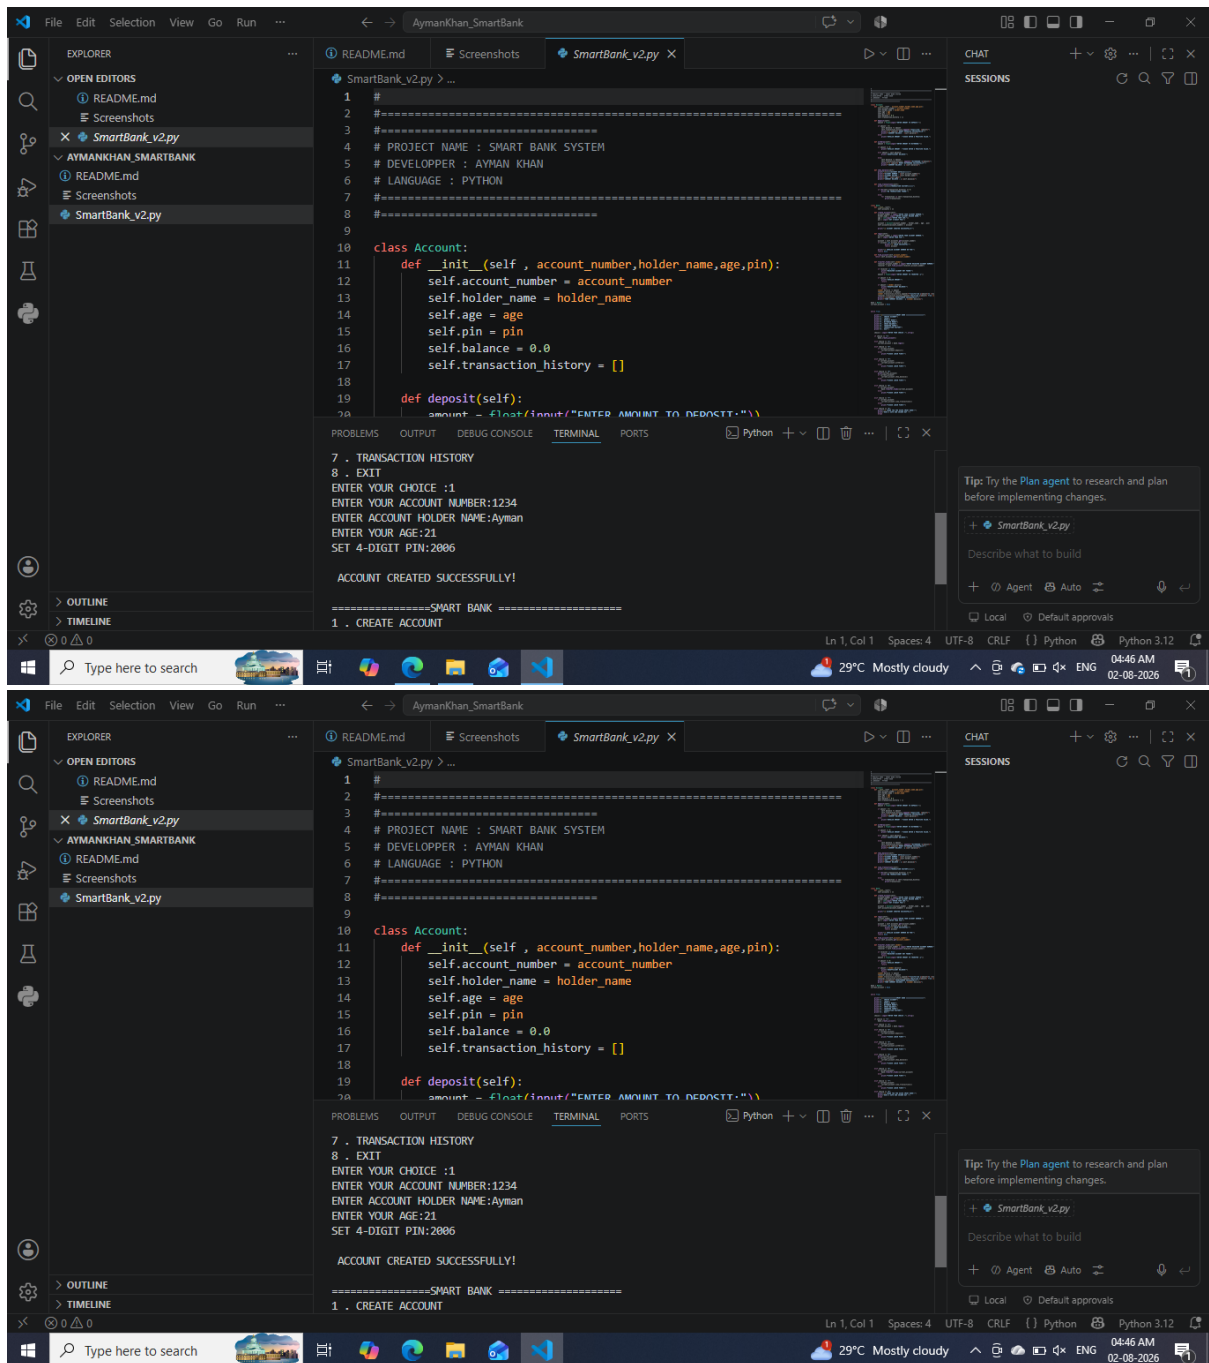

(Add your SmartBank working screenshots here)

7. Learning Outcome

This project helped in understanding Python programming concepts and applying them to create a real-world beginner-level application.

8. *Conclusion*

SmartBank is a simple banking system project that demonstrates Python programming skills and basic software development practices.
